

CHANNEL NUTS

DESCRIPTION

HESCO/RLS Channel Nuts are designed to provide essential gripping power and ease during installation. The channel nuts are intended for a medium load framing system typically found in OEM, commercial, and display markets.

The channel nuts include springs and are offered in two sizes: 1/4-20 10-32. The units also include serrated grooves on one side to assure proper alignment within the channel's track, and hold them securely in place after being tightened.

DIMENSIONS

FEATURES

- 1/4-20 and 10-32 Sizes Available
- Q235A Steel Material
- Zinc Plated Finish
- Serrated Grooves for Correct Alignment
- Easy Installation

INSTALLATION

To use the HESCO/RLS Channel Nuts, simply insert the channel nut into the trough of the channel, and twist the nut into position so that the grooves are aligned with the internal edges of the strut. Threading and tightening a screw into the hole causes the teeth located in the grooves to bite into the channel edge, positively locking the nut into place so it can't slip.
